History AutoCAD is the world's leading industry-standard 2D CAD program for architectural, mechanical, construction, and engineering drawings. The latest release is AutoCAD 2018, version 2018. It was initially developed as a desktop

application and then converted to a cloud-based service in 2008. Its features are more than adequate for general design purposes. It is often used in conjunction with other Autodesk products to integrate drafting and design into a single program. The application is also used by architects, mechanical

engineers, construction engineers, interior designers, and other users in all disciplines to create 2D and 3D drawings. The first AutoCAD application was developed by John Warnock and released in December 1982 to the Macintosh platform. The original AutoCAD introduced multi-level nesting of drawing

components, allowing the user to encapsulate common elements and re-use them in multiple documents. It was the first application of a new graphical user interface (GUI) for the Mac platform called SuperPaint, where graphics are accessed with a stylus instead of a mouse. The original release of AutoCAD

was based on the system utility software for graphics, called MacDraft, developed by MicroPro Software in 1981. The first version of AutoCAD was commercially released in 1982 for US\$500 (equivalent to US\$ in). It was an individual application and not a suite. This was only the first version, and the name

AutoCAD was first registered in 1983. In 1986, Warnock left Autodesk, and the role of Autodesk's official CAD software architect was passed to Dean Hirsch, who then shared it with John Warnock for several years. In 1993, Warnock helped found A-Frame Corporation, and John Hall, of A-Frame Corporation,

then became Autodesk's corporate CAD software architect. In 1994, Autodesk was purchased by The Dechert Group, which at the time was also a PC software publisher. For a brief time, Autodesk was headquartered in New York City. In 1995, the Dechert Group was sold to Computer Associates. In

2005, Autodesk and competitor CadSoft, Inc. merged. In 2007, the company was acquired by privately held The Dassault Group. In July 2007, the name "Autodesk" was dropped in favor of "Dassault Systèmes", and Dassault Systèmes retained Autodesk's leadership role within the group. At the
